Experience

Axamit

Senior Front End Engineer at BellMedia

2022 - Present

2 year(s), 1 months

Montréal, Canada

Projects: [iHeart Canada](#), [CTV News](#), [CTV Shopping Trends](#), [Noovo info](#), [BBN Bloomberg](#), [CP24](#)

- Led the design and implementation of scalable frontend architectures for high-traffic platforms, including iHeart Canada and CTV News.
- Led a team of four frontend developers, conducted cross-team training, and mentored junior developers, enhancing team productivity and technical expertise.
- Developed an advanced ad management system that integrates Google Publisher Tag with AEM, enabling client-side rendering. This solution enhanced ad campaign performance by 53%, offering flexible targeting configurations for individual brands and pages.
- Worked closely with SEO, Editorial, DevOps, and other departments to integrate solutions seamlessly and meet project goals.
- Architected a dynamic image rendering system where AEM generates a set of images, and a Vue component selects the appropriate size based on context. This innovation reduced client-side load and improved page load times by 140%, significantly enhancing user experience.
- Created a component distribution library featuring unstyled components utilized across multiple Bell projects. This toolkit streamlined code unification and reduced development time, boosting team efficiency
- Developed an AEM-driven analytics management system that simplified the workflow for editors, minimizing the need for code changes and expediting the launch of new analytics campaigns ~20% faster.
- Introduced a concept allowing the use of Vue components within AEM's Rich Text Editor. This approach drastically simplified content editing, empowering editors to visually manage Vue components directly within the editor
- Orchestrated the migration of BNN Bloomberg, CP24, and additional website modules to a new CMS, while simultaneously developing new features and ensuring the stability and maintenance of existing systems.

Axamit

AEM Front End Developer at STMicroelectronics

2020 - 2022

2 year(s), 2 months

Minsk, Belarus

Projects: [ST Microelectronics](#)

- Design and creation of reusable AEM components and templates to streamline content management and enhance site flexibility
- Successfully transitioned legacy AngularJS projects to a contemporary React-based architecture, while simultaneously implementing new features for an advanced B2B communication platform.
- Led initiatives to optimize Core Web Vitals and Accessibility standards across the primary website and its subdomains, improving user experience and site performance up to 40%.
- Implemented OneTrust integration for GDPR compliance, while concurrently enhancing analytics and SEO strategies to boost search engine visibility and data security.

Flexmerch Corp

JavaScript / ExtendScript Developer

2019 - 2020

1 year(s), 3 months

Minsk, Belarus

Projects: [Flexmerch PBN](#)

- Created Adobe Illustrator, Photoshop scripts / extensions for computer advanced graphic processing.
- Optimized business expenses by analyzing data and making strategy predictions that saved ~60% of consumable materials expenses.

Moonglimpse Interactive

Game designer, C# Junior Software Engineer (Unity)

Projects:

- Game development for the HandlessWizard game and some prototypes.

2017 - 2018**< 1 year***Minsk, Belarus***Education****Belarusian State University**

Bachelor's Degree in Computer Science (Web-programming, Operating Systems, algorithms and data structures, Computer graphic and Design)

2018 - 2022*Minsk, Belarus***Vue Mastery / Pinia Mastery**

Vue 3 and Pinia advanced courses

2022*Montreal, Canada***Advanced Frontend UlbiTV**

Configuring complex frontend projects, building accessible UI components, architecting scalable applications, optimizing performance, implementing comprehensive testing strategies, managing CI/CD pipelines, and deploying high-quality code, all while ensuring best practices in both frontend and backend integrations

2022*Montreal, Canada***Timur Shemsedinov's NodeJS architecture mentoring**

Asynchronous-, parallel- contract-, multi-paradigm- and meta- programming, and design patterns (OOP, GRASP, SOLID, GoF).

2023*Montreal, Canada***AI and Machine Learning courses**

Programming of neural networks, machine learning, and artificial intelligence. Data analysis and visualization. Usage of AI-powered tools for performance optimization. Promoting AI-driven solutions for business.

2024*Montreal, Canada***Non-commercial projects****FATE Extended Roleplay Assistance Tool****2023 - Present***Typescript, Vue, PWA, Obsidian*<https://stanislavsonder.github.io/fate-extended-character-sheet>

- Design a simple multi-language roleplay local assistance tool for FATE game system.
- PWA support for offline usage. Export/import character sheets to savefiles.

Streamhata Web Application**2021 - Present***Typescript, Vue, Nuxt, NestJS, MongoDB, GraphQL, Socket.IO, Material UI, Figma*<https://streamhata.club>

- Design and development of complex application for managing StreamHata event and Users-for-users content policy.
- Twitch integration to show overlay for additional information. Websocket sessions for multiplayer / devices support.
- Server configuration and CI/CD pipeline for continuous integration and deployment.
